

Fall Protection Dropped Object Prevention

Course Description

Every day, on job sites around the world, tools and other objects are dropped from heights, causing injury and damage. This four-hour program describes the concepts, principles, and equipment, focusing on how and why to “stop the drop” before it starts. The course covers the leading causes of dropped objects, and the methods to control them, so students leave with the practical knowledge they need to recognize and address the hazard.

The course material is energetically delivered and includes hands-on activities and demonstrations, all with a focus on student participation and engagement. The course is classroom based, taught by one of our highly qualified and effective instructors.

Students will be provided a course manual for use during the course, and for future reference. The course material will provide students with an engaging and enjoyable learning environment.

Duration: 4-Hour Program
Course Code: 6405

Course Overview

- Hazard identification
- Physics of falling objects
- Regulatory bodies
- Policy & planning
- 5S approach
- Primary & secondary systems
- Tool tethering components
- Equipment care
- Hands-on workshops
